

Physical Security for Unstaffed Sites

Victor Ambrose (S022)

2027-04-26 | 16:30-17:30 America/New_York | Capstan Room

Session scope

Layered protection for remote substations on a small budget. CE credits: 1.0 PDH

Learning objectives

1. Participants will describe the dependencies in a reliability scenario.
2. Participants will compare the evidence behind two proposed responses.
3. Participants will identify an uncertainty that changes the order of recovery priorities.

Teaching plan

The speaker introduces the source session topic and a fictional case. Participants identify the decision to examine, review the supplied evidence, then discuss how different assumptions change their conclusions.

Case discussion

The group works through a case about physical security for unstaffed sites. Each team records the information it trusts, the information still missing, and the reason for its proposed next question. The speaker compares the teams' conclusions and ties them back to the session scope.

Outline status

This synthetic demo fixture represents the first outline submission. Its review state appears in the conference workspace. The final presentation deck is due April 9, 2027 and has not been uploaded.
