

Workshop W3: Incident Command for Utility Storms

Owen Mercer (S059)

2027-04-25 | 08:30-12:00 America/New_York | Deck Room 3

Session scope

Separate event; \$395, members \$295 with code; 70 seats. CE credits: 3.5 PDH

Learning objectives

1. Participants will identify responsibilities in a fictional storm-response organization.
2. Participants will build a shared situation summary from conflicting reports.
3. Participants will describe an escalation path for an unresolved resource request.

Teaching plan

The speaker introduces the source session topic and a fictional case. Participants identify the decision to examine, review the supplied evidence, then discuss how different assumptions change their conclusions.

Case discussion

The group works through a case about incident command for utility storms. Each team records the information it trusts, the information still missing, and the reason for its proposed next question. The speaker compares the teams' conclusions and ties them back to the session scope.

Outline status

This synthetic demo fixture represents the first outline submission. Its review state appears in the conference workspace. The final presentation deck is due April 9, 2027 and has not been uploaded.
