

Workshop W6: Building an Operator Dashboard

Linnea Sorensen (S058)

2027-04-25 | 13:00-16:30 America/New_York | Deck Room 2

Session scope

Separate event; \$395, members \$295 with code; 70 seats. CE credits: 3.5 PDH

Learning objectives

1. Participants will connect a dashboard indicator to its synthetic source data.
2. Participants will design a visible missing-data state instead of a misleading zero.
3. Participants will evaluate whether a peer can identify an exception and its context.

Teaching plan

The speaker introduces the source session topic and a fictional case. Participants identify the decision to examine, review the supplied evidence, then discuss how different assumptions change their conclusions.

Case discussion

The group works through a case about building an operator dashboard. Each team records the information it trusts, the information still missing, and the reason for its proposed next question. The speaker compares the teams' conclusions and ties them back to the session scope.

Outline status

This synthetic demo fixture represents the first outline submission. Its review state appears in the conference workspace. The final presentation deck is due April 9, 2027 and has not been uploaded.
